

Standard Measure - 21st Street
 bet. Quincy & Harrison - for Measure
 See Page 33 Aug 23/11

For starting point on Harrison -

Set transit over hub set
 on high ground bet. #1 & #2
 and sight to point 0.495

(see page 24) west of foot of Otis
 and line in Hub 5.95 (= 5.93 line
 measure) north of Hub (#1)

thus fixing center of Harrison
 + 21st St. - (this 5.93 being the
 amount necessary to make
 measurement from 24th
 on Harrison correspond to
 distance on Washington)

And in order to make
 Quincy Ave. measure from
 24th to 21st same as
 Washington air measure
 I find I must add 0.08
 to Quincy Ave -

I now measure from Hub at
 Harrison just set, measured
 as follows
