NOTES:

1. Power Co. meter shall be located on power pole 7' above ground.
2. All circuits shall be placed in same trench where possible, but in separate conduit.
3. All pedestrian head assemblies shall be type VI as shown on "Pedestrian Signal Assembly Detail" sheet.
4. All signal head assemblies shall be type I as shown on "Signal Mounting Detail" sheet unless otherwise noted.
5. Multiple street lighting circuit – use single conductor No. 6 in 1" galvanized rigid steel conduit.
6. Signal circuit – use 4 conductor No. 14 cable in 2" galvanized rigid steel conduit. When more than 1 circuit is called for install circuits in same conduit.
7. Pedestrian circuit – use 7 conductor No. 14 cable in same conduit as signal circuit. When signal circuit conduit is not available use 2" galvanized rigid steel conduit.
8. Power sources – use single conductor No. 6 & 8 wire in 1" galv. rigid steel conduit. See Summary & Schedule sheet.
9. Fire alarm circuit – use 1" galvanized rigid steel conduit. Use signal circuit conduit when available.
10. Interlock circuit – use 1 conductor No. 12 cable in 1" galvanized rigid steel conduit. Use signal circuit when available.
11. NEW LUMINAIRES MOUNTED ON P2 AND P3

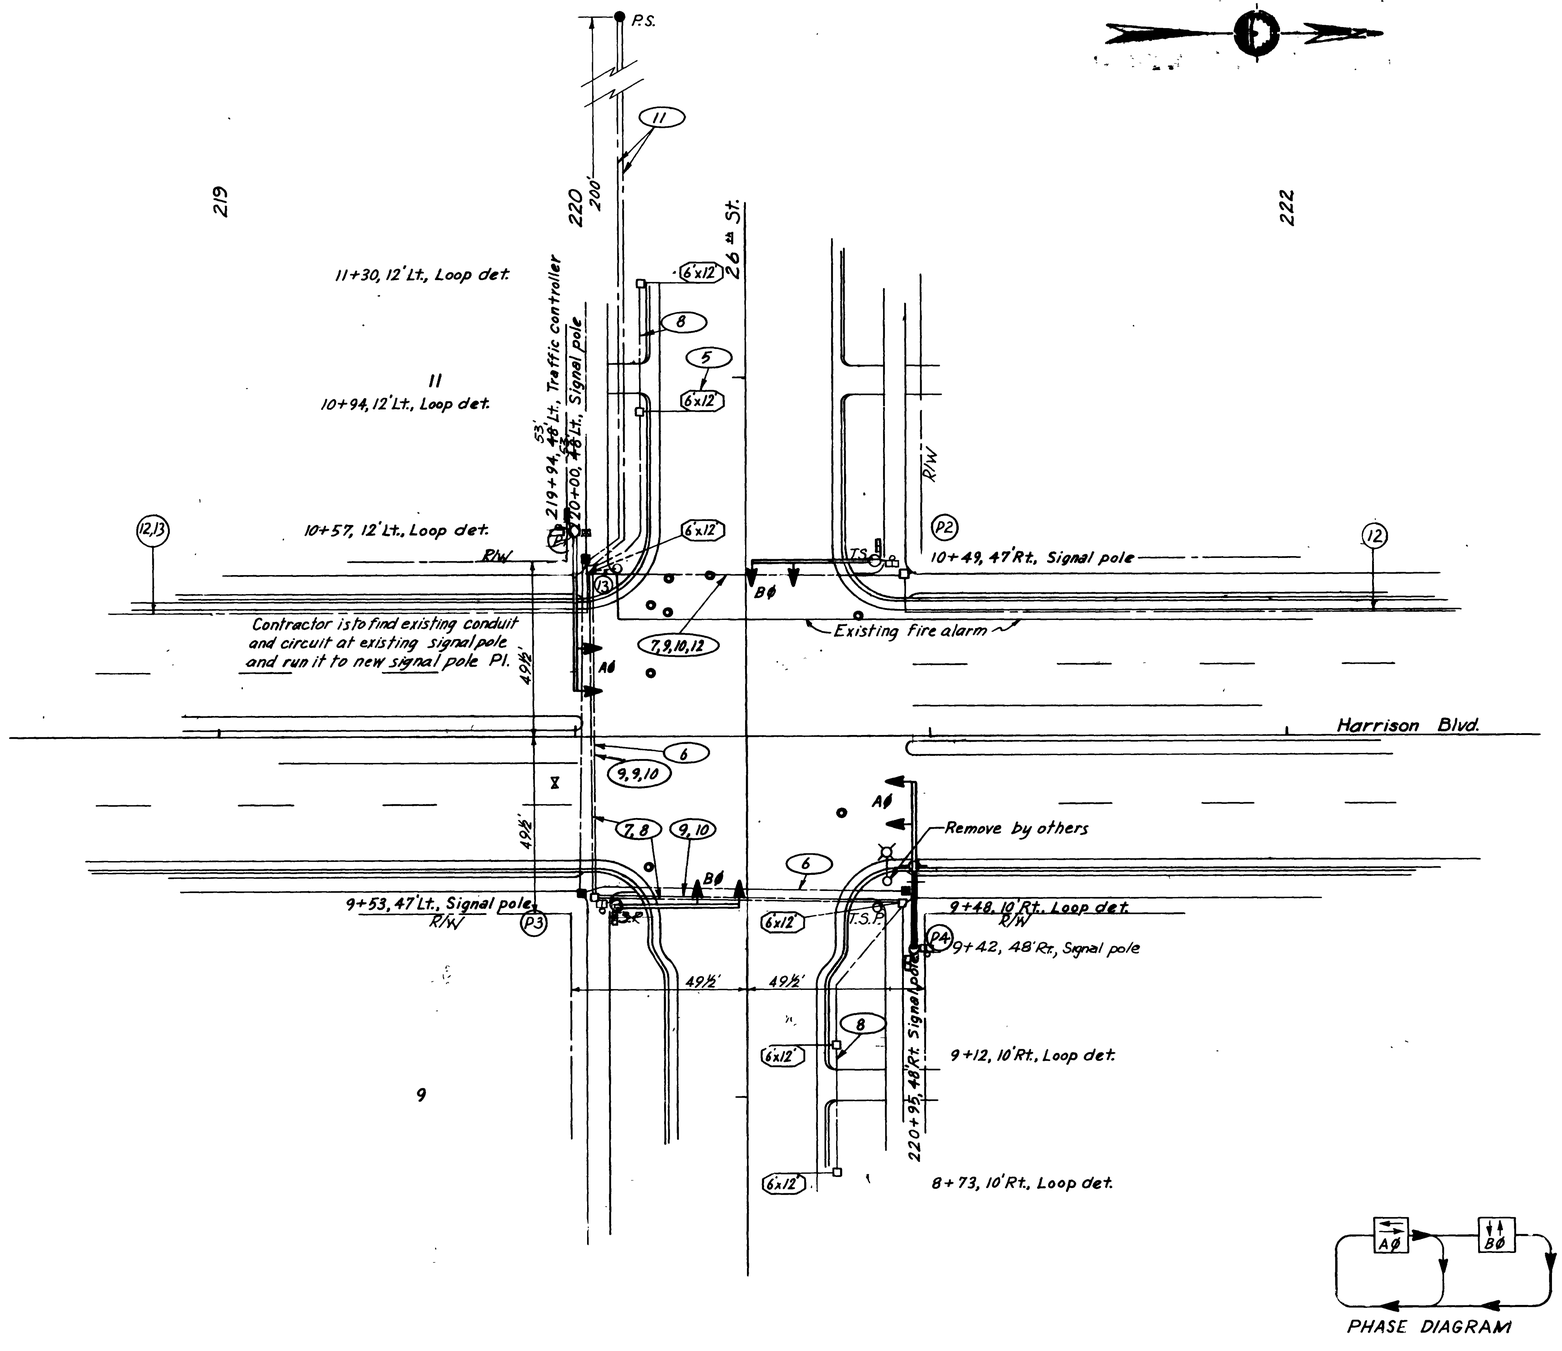
S-61 15



Notes

1. Power Co. meter shall be located on power pole 7' above ground.
2. All circuits shall be placed in same trench where possible, but in separate conduit.
3. All pedestrian head assemblies shall be type VI as shown on "Pedestrian Signal Assembly Detail" sheet.
4. All signal head assemblies shall be type I as shown on "Signal Mounting Detail" sheet unless otherwise noted.
5. Detector loops – use 1 conductor No. 14 cable, 6'x12' loops use 3 turns, all other loops use 2 turns.
6. Multiple street lighting circuit – use single conductor No. 6 in 1" galvanized rigid steel conduit.
7. Push button circuit – use 3 conductor No. 14 cable in same conduit as the detector circuit.
8. Detector circuits – use 2 conductor No. 14 shielded cable in 1" galv. rigid steel conduit. When more than 1 circuit is called for install circuits in same conduit.
9. Signal circuit – use 4 conductor No. 14 cable in 2" galvanized rigid steel conduit. When more than 1 circuit is called for install circuits in same conduit.
10. Pedestrian circuit – use 7 conductor No. 14 cable in same conduit as signal circuits. When signal circuit conduit is not available use 2" galvanized rigid steel conduit.
11. Power sources – use single conductor No. 6 & No. 8 wire in 1" galv. rigid steel conduit. See Summary & Schedule sheet.
12. Interlock circuit – use 7 conductor No. 14 cable in 1-1/2" galvanized rigid steel conduit, use signal circuit conduit when available.
13. Fire alarm circuit – use interlock conduit.

M CABINET

NOTES:

1. THE CABINET SHALL BE FABRICATED OF CAST ALUMINUM OR 14 GAUGE STEEL AND SHALL CONTAIN STRONG SUPPORTS FOR HOLDING THE CONTROLLER UNIT.
2. THE CABINET SHALL BE EITHER BURNISHED ALUMINUM OR GALVANIZED STEEL IN ACCORD WITH ASTM A-123
3. THE GROUNDED SIDE OF THE POWER SUPPLY SHALL BE GROUNDED TO THE CONTROL CABINET IN AN APPROVED MANNER.
4. THE CABINET SHALL HAVE A PANEL BEHIND THE AUXILIARY DOOR CONTAINING THE FOLLOWING SWITCHES:
   - A. MAIN POWER SWITCH DISPATCHER, SIGNAL LIGHTS & CONTROLLER SHALL BE DE-ENERGIZED WHEN MAIN POWER SWITCH IS OFF.
   - B. AUTOMATIC TO FLASHING SWITCH (AND VICE VERSA) SIGNAL LIGHTS OFF WITH CONTROLLER RUNNING.
5. THE CABINET SHALL BE EQUIPPED WITH A THERMOSTATICALLY CONTROLLED VENTILATION FAN.
6. ALL WIRING SHALL BE NEAT AND FIRM AND THE CABINET SHALL MOUNT THE FOLLOWING:
   - A. TERMINAL WITH 30 AMP CIRCUIT BREAKER FOR POWER SUPPLY LINE. TERMINAL UNFUSED, FOR NEUTRAL SIDE OF POWER SUPPLY LINE.
   - B. TERMINALS FOR CONDUCTORS OF SIGNAL CABLES, ONE FOR EACH SIGNAL CIRCUIT AND TWO OR MORE TERMINALS FOR THE COMMON CONDUCTORS.
   - C. TERMINALS FOR DETECTORS AND PEDESTRIAN PUSH BUTTON CABLES.
   - D. RADIO LINE FILTER FOR FILTERING AC+ LIGHTS POWER FOR SOLID STATE LIGHT CONTROL.
   - E. FAILSAFE CONTROL.
   - F. THYRECTOR FOR FILTERING LIGHTNING OR HIGH VOLTAGE SURGES TO GROUND FOR PROTECTION OF THE COMPONENTS.
   - G. MOUNTING BASES FOR SIGNAL RELAYS OR SIGNAL CONTROL UNITS.
7. THE CONTROLLER EQUIPMENT AND TERMINALS SHALL BE SO ARRANGED WITHIN THE CABINET THAT THEY WILL NOT UPSET THE ENTRANCE, TRAINING OR CONNECTION OF INCOMING CONDUCTORS.
8. ALL FIELD TERMINALS SHALL BE SUITABLY IDENTIFIED.
9. ALL OUTGOING TRAFFIC CONTROL SIGNAL CIRCUITS SHALL BE OF THE SAME POLARITY AS THE LINE SIDE OF THE POWER SUPPLY. THE COMMON RETURN OF THE SAME POLARITY AS THE GROUND SIDE OF THE POWER SUPPLY.

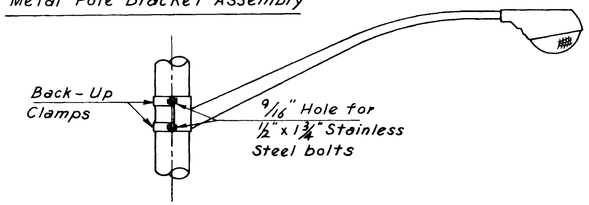
Metal Pole Bracket Assembly



1. Arm member fabricated from 1¼" and/or 1½" standard aluminum pipe of 6063-T4 wrought aluminum alloy.

2. Stamped and/or formed from 6061-T4 wrought aluminum alloy mounting plate; dimensions to be ¼" x 7" x 8¾", depending upon Ø of existing steel pole, plate to be rectangular in shape and provided with 1¾" Ø deburred wire entrance hole; four 9/16" Ø holes provided for bolting purposes; two back-up clamps provided, each to be stamped from 6061-T4 or 6063-T5 wrought aluminum alloy, dimensions ¼" x 1¼" x 8¾"; two 9/16" holes provided in each back-up clamp; four stainless steel ½"-13NC-2 x 1¾" long, hex head bolts, nuts and lockwashers required.

3. Brackets shall have a guaranteed minimum yield of 25,000 psi. They shall be capable of sustaining a horizontal load of 50 lbs. and a vertical load of 100 lbs. They shall sustain a vertical load of 250 lbs. applied at the end of the arm without collapse or rupture of any portion of the structure.

4. Other bracket materials may be used subject to prior approval of the engineer.

GENERAL NOTES

1 POLE

The pole design contemplates the use of tapered metal poles of steel (ASTM A570 Grade C Galvanized ASTM A123) Other pole materials may be acceptable subject to the approval of designs and drawings prior to the opening of bids by the Chief Structural Engineer. Shop drawings are required

Poles shall meet the requirements of AASHO 'Specifications for the Design and Construction of Structural Supports for Highway Luminaires' 1970, for an 80 mph wind with 100 mph gusts

Allowable Stresses
ASTM A570 Grade C – F_b = 21.78 Ksi (.66Fy)
F_v = 10.89 Ksi (.33Fy)
(Increase 40% for Group I Loading)

2 ANCHOR BOLTS

All anchor bolts shall be 1Ø x 2'6" min with top 5" threaded and shall meet ASTM A325 with regular square head or regular square nut tack welded and heavy hexagon nuts. Exposed portions of anchor bolts shall be cadmium plated in accordance with ASTM A165 NS.
Anchor bolts shall not be welded to reinforcing steel

3 FOUNDATION

Foundation shall be cast-in place in augered hole
Foundation shall be class A concrete (AE)
2'Ø opening required in island to facilitate access to pole base

SEE STD. DWG. V-988

GENERAL NOTES

MATERIALS [illegible] CONSTRUCTION [illegible] SHALL BE [illegible] ACCORDANCE WITH THE STATE OF UTAH STANDARD SPECIFICATIONS FOR [illegible] BRIDGE CONSTRUCTION, EDITION OF 1970 AND SUPPLEMENTS THERETO WHICH ARE IN EFFECT ON THE DATE [illegible]
ALL REINFORCING STEEL SHALL BE DEFORMED BILLET-STEEL BARS CONFORMING TO ASTM DESIGNATION A 615-68, GRADE 60
STRUCTURAL STEEL FOR GRATING SHALL BE STRUCTURAL CARBON STEEL CONFORMING TO A A S H O DESIGNATION M-183 (A S T M A-36).
GRATING AND BEARING ANGLES SHALL BE HOT-DIP GALVANIZED AFTER FABRICATION IN ACCORDANCE WITH A A S H O DESIGNATION M-1[illegible] A S T M [illegible]

A UNIT CATCH BASIN SHALL INCLUDE GRATING BEARING ANGLES AND BOX COMPLETE CLASS AA CONCRETE (AE) TYPE II CEMENT [illegible] REQUIRED

DESIGN DATA

THE DESIGN IS IN ACCORDANCE WITH THE [illegible] AND INTERIM SPECIFICATION
LOADING: HS 20-44
f_c = [illegible]
f_s = 24 [illegible] (REINF. STEEL) [illegible] (STRUCT STEEL)
n = 8

QUANTITIES
