Wastewater System Requirements as stated in the October 4, 2006 letter from Weber-Morgan Health Department.

Soil characteristics, percolation rates of 60 MPI, and anticipated ground water tables not to exceed 96 inches, fall within the range of acceptability for utilization of a Conventional Wastewater Disposal System as a means of wastewater disposal. Maximum trench depth is limited to 72 inches.

Plans for the construction of any wastewater disposal system are to be prepared by a Utah State certified individual and submitted to the Weber-Morgan Health Department for review prior to the issuance of a Wastewater Disposal permit.

This subdivision plat shows the location of each exploration pit and percolation test site. The test pit number was provided by the Weber-Morgan Health Department.

Each on-site individual wastewater disposal system must be installed in accordance with R317-301 through R317-313, Utah Administrative Code, Individual Wastewater Disposal Systems and Weber-Morgan District Health Department Rules. Final approval will be given only after an on-site inspection of the completed project and prior to the accomplishment of any backfill.

Please be advised that the conditions stated are valid for a period of 18 months or April 4, 2008. At that time the site will be re-evaluated in relation to rules in effect at that time.
